When machines and computers, profit motives and property rights are considered more important than people, the giant triplets of racism, materialism, and militarism are incapable of being conquered.

united for peace & justice bayarea

is a regional, movement building coalition that coordinates and supports the work of existing local groups and strives to strengthen or create solidarity where it is lacking whenever possible. We link the wars abroad with the assaults at home, and U.S. militarism to the corporate economic interests it serves. We work to make the peace movement a strong ally to movements for social and economic justice in the U.S. and abroad.

INDIVIDUALS AND ORGANIZATIONS are encouraged to participate:

another un-happy Birthday

we have been living with the war and occupation of Iraq for six years now. Each year handing over ever more precious gifts: Our national goodwill and reputation in the world, our soldiers' health and their lives, our sense of honor, and the lion's share of our resources.

In this time of unparalleled international economic crisis- we must connect the dots: we can't afford to continue the wars in Iraq and Afghanistan either morally or financially!
